Teddy's Gold-Thread Procedure and X-ray

Maru Animal Hospital's gold thread (gold-thread implantation) procedure and an October 2023 X-ray

Patient	Teddy · Dog (Yorkshire Terrier) · Neutered male · 13 years old in 2023
Visit to Maru Animal Hospital	August 30, 2023
Procedure	Insertion of gold thread (gold-thread implantation) and Life Energy care
Related test records	"Teddy's Kidney Disease Test and Treatment Records" — lab reports from ANTECH (USA) · NEODIN · Konkuk Univ. · SNU Animal Hospitals

01 Case overview

Course of treatment

Teddy (Yorkshire Terrier, 13 years old, male), who lives in New York, USA, was diagnosed as incurable with chronic renal failure (BUN 107, Creatinine 2.4) by his primary veterinary hospital in the U.S. on August 3, 2023. After 7 large animal hospitals in New York also advised giving up, a younger sibling living on Jeju Island recommended Maru Animal Hospital in Seoul, which specializes in autoimmune diseases, and Teddy entered Korea through Incheon Airport with his owner on August 29.

Over about 5~6 months of treatment, the kidneys and liver cirrhosis (ascites) recovered by about 50~60%. Among several treatment methods, a procedure was performed in which gold thread with Life Energy applied was placed in the liver and kidney areas; recovery tests were done at Konkuk University Animal Hospital and Seoul National University Animal Hospital, both affiliated with colleges of veterinary medicine.

Maru Animal Hospital's account

- Teddy came to Korea after a U.S. test on August 3, 2023 showed BUN 107 and Creatinine 2.4. Maru Animal Hospital inserted gold thread (gold-thread implantation) in the liver and kidney areas and provided Life Energy care alongside it. Subsequent tests were done at Konkuk University and Seoul National University Animal Hospitals.
- During the same period, oral medication and subcutaneous fluids prescribed by the university animal hospitals were also given.

02 Gold-thread insertion

Gold-thread insertion needle ① · Back

Disposable insertion needles containing gold thread inserted into the skin of the back

Gold-thread insertion needle ② · Back to flank

Insertion needles placed from the back to the flank

03 X-ray (October 2023)

A mobile phone photo of a lateral abdominal X-ray displayed on Maru Animal Hospital's PACS screen. "Maru Animal Hospital" (in Korean) and the date "2023-10-1..." are visible at the top right of the screen.

- Red circles mark where the gold threads were implanted.
- No X-ray interpretation is included in this material.
